TEAK

YAAZ is an in-house manufacturer that covers the complete manufacturing process of its outdoor teak furniture and strictly controls every stage. Every piece of wood is carefully selected and is directed to a specific function according to its strength and look. Precise machinery is used to shape the components and every piece is kiln dried to attain the ideal moisture content before the processing and gluing stages. YAAZ uses no take of forest origin, but only teak supplied from sustainable Myanmar (Burma) that strictly adhere to the rigorously controlled environment and certified criteria which include replanting trees after harvest. We select individual full-grown trees and manage the whole manufacturing process carefully, from log to finished product. We deliver our furniture sanded, polished and sealed and we advise you to allow the furniture to age and weather naturally. Teak is a natural and thus an ever-changing material that can be left outdoors throughout the seasons and it requires little to no Cleaning and Using Instructions. As teak weathers due to its exposure to rain and UV rays from the sun, it will gradually change color regardless of its finish. The "original" or "dark" finish of teak will naturally and invariably fade over time. Left outdoors teak will age naturally and as it weathers as a result of exposure to rain and UV rays of sunlight, it gradually will turn from its honey-gold color to a beautifully soft, silvery-grey patina color and consequently will remain stable for many years.

Cleaning and Using Instructions

The teak tree is naturally an oily tree and needs to be oiled with teak oil once or twice a year to replenish the surface oils that are lost over time due to weather conditions. Instead of maintenance oils developed over time, water-based protectors are now used. Varnish and similar chemicals are never used. The aged and worn surfaces are sanded with 150-180 grit sandpaper and then washed with teak cleaner and left to dry. After the second sanding, the washing process is repeated. A water-based protective coating is applied using a cloth, covering every part of the product including the hidden areas. It is left for one day before applying the second coat. The second coat reaches touch dryness after 4 hours in an environment with sufficient airflow and an average temperature of 20 °C.
