TEAK

YAAZ is an in-house manufacturer that covers the complete manufacturing process of its outdoor teak furniture and strictly controls every stage.

Every piece of wood is carefully selected and is directed to a specific function according to its strength and look. Precise machinery is used to shape the components and every piece is kiln dried to attain the ideal moisture content before the processing and gluing stages.

YAAZ uses no take of forest origin, but only teak supplied from sustainable Myanmar (Burma) that strictly adhere to the rigorously controlled environment and certified criteria which include replanting trees after harvest.

We select individual full-grown trees and manage the whole manufacturing process carefully, from log to finished product. We deliver our furniture sanded, polished and sealed and we advise you to allow the furniture to age and weather naturally.

Teak is a natural and thus an ever-changing material that can be left outdoors throughout the seasons and it requires little to no Cleaning and Using Instructions. As teak weathers due to its exposure to rain and UV rays from the sun, it will gradually change color regardless of its finish. The "original" or "dark" finish of teak will naturally and invariably fade over time. Left outdoors teak will age naturally and as it weathers as a result of exposure to rain and UV rays of sunlight, it gradually will turn from its honey-gold color to a beautifully soft, silvery-grey patina color and consequently will remain stable for many years.

Cleaning and Using Instructions

The teak tree is naturally an oily tree and needs to be oiled with teak oil once or twice a year to replenish the surface oils that are lost over time due to weather conditions.

Instead of maintenance oils developed over time, water-based protectors are now used. Varnish and similar chemicals are never used.

The aged and worn surfaces are sanded with 150-180 grit sandpaper and then washed with teak cleaner and left to dry. After the second sanding, the washing process is repeated.

A water-based protective coating is applied using a cloth, covering every part of the product including the hidden areas.

It is left for one day before applying the second coat. The second coat reaches touch dryness after 4 hours in an environment with sufficient airflow and an average temperature of 20 °C.

PERFORATED SHEET

Durable Perforated Sheets Offer Stunning Aesthetic Effects. Meanwhile, various decorative hole patterns are available, such as triangular, diamond, hexagonal, four-point star, oblong, etc. Our custom patterns are carefully selected for our collection.

Cleaning and Using Instructions

For regular cleaning, wipe the aluminum furniture with a soft cloth or sponge and a mild detergent solution.

To remove any stains or grime buildup, use a non-abrasive cleaner and a soft-bristled brush.

Avoid using steel wool or abrasive cleaners, as these can scratch the surface of the aluminum.

Rinse the furniture thoroughly with clean water and wipe it dry with a clean, dry cloth.

For extra protection, apply a coat of car wax to the aluminum surface. This will help to protect the furniture from the elements and keep it looking new.

Do not place heavy objects on the aluminum furniture, as this can cause dents or damage to the surface.

Avoid dragging the furniture on rough or uneven surfaces, as this can scratch the aluminum.

Do not expose the furniture to extreme weather conditions, such as heavy rain or extreme heat. If possible, store the furniture indoors or under a protective cover when not in use.

If the furniture becomes hot in direct sunlight, allow it to cool down before using it.

By following these cleaning and usage instructions, you can help ensure that your aluminum furniture stays in good condition for many years to come.
